Model No. WF-MODULE-CAM

WiFi Mini Module DIY 1080P HD Spy Camera

You need a spy camera but not quite sure how to go about or what to do? We often receive calls from customers worried about introducing something new into a house or office but with a problem of some nature, still need a hidden security camera. Well this is it. Introducing our new WiFi Camera module so YOU decide where to hide the camera or what to hide the module in. Rechargeable battery powered, it can also be mains powered if preferred. If you have power handy no problem we will provide an Australian 5V USB power supply to keep the camera fully functional under normal power whilst charging the battery at the same time.

So there you have it. No more excuses as this camera can be hidden in just about anything. Only the pinhole lens on the end of the flexible ribbon needs to see out. The rest of it can be concealed. Have you ever seen anything quite like it? Please note that Spy Cameras are NOT a security camera substitute. This is a spy camera and should be switched off when not in use

As mentioned If you have any concerns about introducing something new into a home or office, a Nursing Home perhaps, what could be better? It's now up to you to put on the thinking cap and decide how to hide or conceal the camera by simply allowing just the pinhole lens to see out. If you can do that at the very least then you have a great spy camera solution that can be moved about anywhere.

Supplied with a rechargeable lithium battery which can keep the WiFi camera functional for 4 hours or more but it can also be connected to a power point for long-term function if power is handy. If power is switched off it will still function for 4 hours regardless. That means you don't need to worry about the battery going flat.

Provided you have WiFi available wherever the camera is located (you need to know the WiFi router password) then you have complete remote access to the camera from anywhere in the world and from any web-enabled device. Free App is available for Iphone and Android.

Tell me more

Ideally suited to homes, offices, warehouses, sheds, Aged Care Homes etc you name it. As a matter of interest this fantastic WiFi Mini Module camera is a very covert pinhole megapixel camera. Where can I hide the camera? Well it all depends on where the camera is be located and what it needs to see. Look around you home or office etc. Do you have an air-con air vent in the ceiling? That might be a good starting point? What about a fake flower arrangement? Rip the guts out of a new or old smoke detector and mount the lens inside the detector housing or a non-used alarm PIR motion sensor. Come on people...think about it??

Remotely access the camera from your mobile phone and if a micro SD card is slotted into the module, yes you can even remotely playback time and date stamped recordings. Remember whilst viewing recordings on your phone, save anything important to record to your phone and record whilst live viewing. Set the camera to arm and disarm at times that you choose. The App is packed full of features and functions.

Why do we sell WiFi Camera modules? Of all the different type of Spy Cameras available, in many cases it doesn't suit requirements. It could be that introducing anything new into a home or office could potentially create suspicion to this DIY option is clearly the perfect solution.

Specifications

WiFi Live Streaming video

Micro SD Card Capacity	Recording Time
1GB	56 Mins
16GB	15 Hours
64GB	60 Hours
128GB	119 Hours

The advertisement features a collage of images. On the left, a hand holds a smartphone displaying an app interface with a list of video files, including timestamps and file names. In the center, a man in a suit is seen in a library setting. On the right, a hand holds a small camera module, with a black hat placed next to it. Below the images, four Kingston Micro SD cards are shown in a row, labeled with their capacities: 1GB, 16GB, 64GB, and 128GB. Below each card, the corresponding recording time is listed: 1GB=56 Mins, 16GB=15 Hours, 64GB=60 Hours, and 128GB=119 Hours. The text "Support Micro SD card 128GB Max" is prominently displayed above the cards.
