## WiFi & Bluetooth Stereo Music Speaker 1080P HD Spy Camera

One of the most advanced Spy Cameras ever invented so far. Here we have an extremely nice looking speaker but not just any speaker. This is a super high quality stereo music speaker with built in Bluetooth. If you have music on your Iphone or Android, interface it with the speaker and listen to your music anywhere anytime.

However, also built into the speaker is a WiFi module plus a 2 megapixel pinhole camera and a mini microphone. Live view this camera from your phone or PC from anywhere in the world and remotely save or playback motion detected video and audio recordings. Absolutely amazing stuff and so covert !! Wow.

As mentioned this Stereo Speaker HD 1080P WiFi Spy Camera is like nothing else. If you have any concerns about introducing something new into a home or office, a Nursing Home perhaps, what could be better? Its fully functional as a music speaker (sounds brilliant by the way) has an internal rechargeable lithium battery which can keep the speaker and WiFi functional for 10 hours or more but it can also be connected to a power point for long term functionality if power is handy. If power is switched off it will still function for 10 hours. That means you don't need to worry about the battery going flat.

Provided you have WiFi available wherever the camera is located (you need to know the WiFi router password) then you have complete remote access to the camera from anywhere in the world and from any web-enabled device.

### **Tell me more**

Ideally suited to homes, offices, warehouses, sheds etc you name it. As a matter of interest this fantastic WiFi Speaker camera has a very covert pinhole megapixel camera built in. To the naked eye no one but no one will find it. After all, this is a real and fully functional music speaker so to any prying eye, who would take any notice or even suspect.

When remotely accessing the camera LIVE from your mobile phone, the entire camera head can be silently rotated up to 330 degrees left or right which means viewing an entire room. Impressed...I thought so but wait there's more. No Glow Invisible IR (Infra Red) night vision. Yes that's right, this camera can see and record even in a totally dark environment using built in night vision up to 3M from the camera.

### **Specifications**

WiFi Live Streaming video  
P2P LAN view within 50m of the router (depending on obstacles)  
Chipset : Hi3518E V200  
Lens : OV9712
