Catch-Em Cam

The Catch-Em Cam is a new high sensitivity digital surveillance camera that can capture high-resolution colour images in low light conditions when motion is detected within its field of view. The images are stored on a removable memory card for easy viewing on a computer or PDA. The camera can also be triggered from a window, door opening, and cash register or alternatively can be configured to capture images on a time-lapse basis.

Catch-Em Cam

How does it work?

The Catch-Em Cam is an Australian made new high sensitivity digital surveillance camera that can capture high-resolution colour images in low light conditions when motion is detected within its field of view. The images are stored on a removable memory card for easy viewing on a computer or PDA. The camera can also be triggered from a window, door opening, reed switch, cash register or alternatively can be configured to capture images on a time-lapse basis.

The camera can store up to 65,000 images and will optionally overwrite the oldest images when the memory card is full - for 'set and forget' operation.

The Catch-Em Cam can function both as a Security Camera and Standalone Surveillance Camera. When used as a standalone unit, its internal high capacity (HC) battery can power the camera for up to 9 weeks in standby mode, utilising its ultra low power video processing technology. If for example it takes 200 photos per day, every day of the week, the camera will still operate for around 6 weeks on one battery charge! The camera can also be powered from an external mains plug pack.

A remote control enables you to capture images on command as well as arm and disarm the camera.

Who uses Catch-Em Cam & Why?

Catch-Em Cam ideal for monitoring “trusted” environments such as storerooms, dispatch areas, management offices, and cash registers. It can also be used as a security camera for detecting intruders in the home, office or retail shop, by simply connecting it to existing alarm systems if preferred, or simply be independent using battery or mains power.

Property owners often store fuel, stock, machinery etc on large tracts of land or sheds but in many instances power is not available or in short supply. Fuel, cattle, tools and so much more are stolen every day and without the evidence, Police are powerless to prosecute. This is where the Catch-Em Cam can help.

Unlike other inferior cameras, Catch-Em Cam has a built in DIGITAL WATERMARK with every image. This watermark is ideal in legal situations where the images can be proven to be authentic, thus not tampered.

How do I see the pictures?

Catch Em Cam is provided with a range of accessories, which include a wireless remote to arm and disarm the camera, rechargeable battery, USB memory card reader, software, 12V power supply to recharge the battery and instructions.

Remove the SD memory card from Catch-Em Cam, insert into the USB reader and there you have it. Play back the images direct to your PC one by one or in movie fashion. If you find that some images are important and need to be retained, just tick the check box and save to PC Hard Drive so you can print, duplicate, email or catalogue as you choose.

It's not rocket science and is o easy to do. Use other programs such as Adobe Photoshop if preferred, you have the choice.

Specifications

- High sensitivity image sensor for low light operation
- Direct replacement for existing alarm system motion detectors.
- Stand alone operation from internal HC battery with 9 weeks standby.
- Set and forget operation
- Customised image-capture sequence & Pre-Trigger image capture
- Event-Triggered or Time-Lapse camera modes.
- Time and date stamped images with programmable text overlay.
- External trigger input
- Flexible scheduler for independent camera arming and disarming
- Time and date stamped event log
- Image encryption for security
- High-speed image viewer included with setup software.
- Digital signature including camera ID, within each image for legal verification
- Optional Black & White image sensor for very low light or covert applications
- Optional weather-proof case and flush mounting kit (for folder and bollard mounting)

Can I use Catch-Em Cam outdoors?

If being used outdoors, we have a wide range of suitable and covert means of concealing the Catch- Em Cam.

An Alloy bollard about 1m high (as pictured) is one option and can be powder coated if desired, or the grey colour plastic box also pictured is another. The box can be easily disguised to look like a power box etc but we can discuss those options with you personally as there are many more we prefer not to advertise for obvious reasons.

USB Memory Card Reader

Wireless remote control
