Model Number – mini-pkt-dvr

Short Description

Mini HD Pocket DVR Body Camera with Night Vision is available to order online or simply call our office. Most credit cards accepted, and we offer discreet online tracking overnight express post-delivery. Ideal as a *nanny cam*, *body camera*, *handheld hidden camera*, *spy camera*, *wall mounted security camera* or as a *disguised hidden camera* for homes, offices, and warehouses etc. This isn't just any hidden spy camera. With 1080P HD video recording and audio, this truly is amazing quality despite its miniature size.

Description

Pictured below is the Hidden Camera Surveillance *Mini HD Pocket DVR Spy Camera*. One of the smallest security cameras on the market, it delivers super high recording resolution, and it supports up to 64GB Micro SD (optional) memory card. When the memory card is full it will auto overwrite from the earliest recording date, so you won't miss a thing.

Mini HD Pocket DVR Body Spy Camera is supplied with a range of camera mounting options for personal use but being so small it can be very easily hidden. The included miniature brackets and clips are suited to shirt pockets, Jackets, T-shirts, or wall mounting. However, if the camera is to be handheld or hidden, there's no need to use any bracket but nonetheless included.

If you prefer to hide the camera somewhere, it's certainly small enough. This *mini HD Hidden body camera* can function continuously for up to 100 minutes at 1080P resolution or 2 hours at 720P. If on the other hand you require longer term recording, we provide a mini-USB lead and a 5V USB Australian power adapter with each camera at no extra cost.

When 240V power connected, the 5V USB adapter will both power the camera and charge the internal battery thus allowing for longer term recording and surveillance if preferred.

Mini HD Pocket DVR Body Spy Camera can also be connected to a PC or MAC USB interface to charge the internal battery. However, PC USB will only charge the battery and allow for SD memory card access, it won't power the camera to record. Only the supplied 5V USB power supply will do that.

What other functions does the Mini DVR Cam support?

Incredible as it may seem, this *world's smallest Body Worn hidden Spy camera* supports Constant recording or Motion Detection recording. Users simply choose their preferred recording requirement by moving a sliding camera switch one way or the other. What could be easier than that?

Whilst the camera has an internal rechargeable battery, some customers assume that by using motion detection recording, this will allow for significantly longer recording capacity which isn't quite true. Motion detection means that each time the camera detects movement, it will record for a few minutes and save that recording as a memory card file, time and date stamped. However, the camera is on and armed regardless of motion so whilst the camera is armed, it's still using battery power. There is little power consumption difference between motion or constant recording. Both options allow for a few hours of recording per charge or connect to power for longer term recording, that's the key.

To playback recordings stored to the internal micro memory card, either connect the camera to your PC or MAC USB and this will recognise a new device found. We prefer to use VLC although the camera supports Windows Media Player and other 3rd party players.

Each camera is supplied with a USB SD card reader meaning users may remove the memory card, slot it into the reader and connect the reader to any PC or MAC USB interface. View the camera recordings and if any event is deemed to be important, copy and save that recording to PC so it's never lost or overwritten.

All video and audio SD card recordings are in sync with a time and date stamp for authenticity.

What customers like

Customers love the size and how well it can be concealed even **in plain sight!** In terms of recording comparison to other miniature cameras, there is no comparison.

Customers also enjoyed the camera mounting and wearing **attachment options.** The camera *mini HD DVR spy camera recorder* can be worn several ways or hidden in a discreet location.

Mini Hidden Spy Camera is one of the very best wearable spy cameras and for good reason. Not only does the *body spy cam* support an SD card up to 64GB capacity (must be class 10 or better) but it also has **night vision HD video and motion detection!** Whether you're looking for a hidden security camera, or body worn, this tiny camera has it all!

Furthermore, this wearable *hidden spy camera* comes with a **TON** of extras. The package includes a front clip, rear clip, camera mount bracket, screws, instructions, 12 months warranty, card reader, reset pin, and a USB cable for charging. All in all, a neat product to get you all the secret security footage you will even need.

This is a DVR (Digital Video Recording) *body worn spy camera.* It does not support WiFi and can't be remotely accessed from a mobile phone or Internet. Hidden Camera Surveillance does offer a wide range of WiFi Hidden Spy Cameras as well and if this is what you're seeking, call or email our us.

How does it work?

Spy Security cameras are commonly used in areas where the user needs to discreetly enter a particular zone. That could be to ensure valued goods and belongings are not being stolen or it may be that you have a cleaner or nanny suspected of stealing. Perhaps when a child is being minded, nice peace of mind if nothing else to know that child is cared for and being well treated.

It may be that you need to covertly record what a person is doing in a store. It's not the sort of device people will take any notice of but that's the point. You may not be intending to hide the camera but that's totally up to you.
